

CHROMALIVE TESTIMONIALS

I thought I'd pass on a couple of recent experiences with the Chromalive Penlight.

While on the island my brother got stung badly one night by a wasp. He normally reacts very strongly to stings and will swell up like a baseball at the site. I sequenced blue & turquoise for 20 minutes right away on his sting and the swelling went totally flat as well the brilliant red colour disappeared. By morning there was nothing there except a tiny little mark where the wasp had taken the bit out. Amazing!

Then the other day Chels (my daughter) actually slammed her left hand in the door of our one ton truck. She shut the door right closed on her hand! OUCH!!! Again I sequenced with blue & turquoise for two 20 minute sessions. It was the most amazing thing to watch. The swelling went away immediately and the area around where she shut the door on went through the phases of bruising while I watched. By morning there was no bruising or swelling whatsoever. There was only a thin faint red line at the contact point. I know there should have been major damage but she had next to no pain the next day!! love this pen!!!

My brother just had major artery surgery in both legs and through the groin. He was here today prior to getting out the staples (79 of them) and of course the entire stapled area was red and sore. I used the blue colour in the small tipped Chromalive Penlight about an inch away from the incision. I just held the light in the most angry looking area and then slowly moved it up and down the entire incision. Before my eyes, I could see the redness fade. In a matter of ten minutes he was in much better shape to go and have all of the staples removed. When he returned, he was again red and inflamed. This time I used the larger round tip with the blue, just off the skin surface for just two or three minutes. Amazing and instant results. He was more than thankful for the relief from the pain that even morphine had not given him!

Donna Harms, Nelson, BC

After 10 years of chronic pain in my neck from an auto accident I am almost completely pain free after three days of treatments using the Chromalive Penlight.

I want to share with you my experiences with the Chromalive colour therapy penlight. I have been using it with a patient who has breast cancer. Before her surgery she had terrible pain in her feet and arms and she was depressed. After 10 days of the chromotherapy she was without pain and her depression lifted, so she was in much better shape

for her surgery. I also use the penlight with ten of my other patients with different illnesses and they continue to get better each day.

A few years ago, my brother Anton was severely burnt in a house fire rescuing his daughter. The doctors said it would be over a year before he was well enough to leave the hospital. His wife and our family diligently applied the Chromalive Penlight to his skin several times everyday to promote healing and prevent pain. To the doctors amazement, within three months of the fire, my brother was able to leave the hospital and rejoin his family. He continues to use the penlight because he has found that, over time, it reduces the unsightly scar tissue covering the burns on his body.

My wife and I were on a regimen of pills and painkillers to combat our arthritis. But thanks to the Chromalive Penlight, both her and I have reduced our dependence on anti-inflammatory medicines. Anytime we have a flare up, we apply the Chromalive Penlight to the afflicted area for a few minutes and the pain and inflammation goes away. As a result, we also have increased joint mobility which makes us feel like teenagers again. We're doing things together (like camping and canoeing) that we haven't done in years because we're free of the nagging pain. Even our rheumatologist has said to us that whatever we're doing - Don't Stop!

For years I have been suffering from eczema on my legs. Within one Chromalive treatment the itchiness diminished and the inflammation lessened. Within 3 treatments the 3" x 6" patch of eczema started to disappear and within 6 treatments it was gone! Totally healed after 2 weeks. This is after trying several creams prescribed by my doctor.

... my dog has had some medical situations also. Thanks to the Chromalive I have been seeing a good improvement in his condition. The text books are so valuable. I use the Chromalive on all of my clients and at least they are keeping well.

One client had a major abdominal surgery two wks ago. We have continued to use the Chromalive and wonderful manual to get her health improved. What a super technology.
